

## JETTER

Pipeless roll-up door

The sheet reverses and ascends as soon as the descending sheet is in contact with an object or a person, reducing the impact. Furthermore, even if the sheet comes off from the rail, it automatically recovers to operate properly. Ideal for food process factory, high technology plants and stores. Indoor use is recommended.

## SLIDING DOOR

The door opens with light touch and closes automatically after passing through. As the pneumatic break works just before it completely closes, it closes safely with no rebound. It gives you a smooth passing as the door is a hanger type without rail nor groove on the floor. Ideal for health-care facilities such as hospital, home for elderly, or disabled toilet.

## SWING DOOR

Self-closing swing door

It opens with a light touch of a finger, and closes automatically and slowly, allowing the door to always center itself quietly without bouncing. Its exceptional durability and functionality makes it a perfect applications in harsh conditions. Suitable for supermarket, convenience store and restaurant.

## SMOOTHER

High-speed automatic roll-up door with pipe

Smoother is HACCP compliant, suitable for factories and warehouses where vehicles and people enter/exit frequently. This highly wind-resistant, high-speed sheet shutter minimizes air leak as well as impact of wind, entry of dust, and insects by its speedy opening and closing motions, this also makes it ecological as temperature change is also kept minimized. Safety is also excellent as its motions are entirely controlled automatically using sensors.

## SLIT CURTAIN

As this is made of PVC, you can easily pass through and it is cost effective. It is perfectly dustproof and insect proof as well as a great sound and thermal insulation. As the curtain is transparent, the lighting to indoor is excellent, contributing to prevention of accidents.

## MINI SWING DOOR -P type-

Materialized smart form by integrating the designs of doors and hinges. Automatic closing counter doors combined with light weight and strength.

## NIGHT COVER

Night cover for open chilled showcase

After closing the shop, this cover is used to cover the open part of chilled showcase. The operation is very simple, this prevents leak of cold air and saves electricity by improving thermal efficiency. This is useful to stabilize the internal temperature and to keep freshness of stored merchandise. Easy installation with magnet.

## SUPER SWING DOOR

Durable design that is resistant against impact of forklift trucks. Suitable to entrances of plants or refrigerated warehouses.
