

# Easy to install! For energy saving of open-cases

Just mount it on the upper part of your existing showcase. Air curtain rectifies the airflow and reduces energy consumption by covering the opening.

Energy saving product

## SHORT STRIP CURTAIN for multi-shelf showcases

In a typical open showcase, an air curtain is usually used to prevent infiltration of the external air. Mounting a short strip curtain will rectify the airflow by copening space. This achieve an energy saving of about 3~6 percent (1 to 2°C in temperature).

\*In case of some semi-multi-shelf showcases, it is necessary to check if the short strip curtain interferes with taking in and out goods.

### Tested performance

[Performance test based on CEW-EA9885]

## Method for mounting a short strip curtain

**Air outlet: Single type specification**

**Air outlet: Double type specification**

① Please check the mounting locations because there are showcases with single type and double type outlets.

② Mount the curtain to the red bar area  (along the outlet).  
When mounting, peel off a film from the adhesive double-faced tape on the rear surface.

**After mounting the single type strip curtain.**

**After mounting the double type strip curtain.**

### — Attention —

A shelf of a showcase is divided into 909-mm and 1,212-mm sections.  
An energy saving curtain is available at 909 mm and 1,212 mm in size, please choose the curtain that matches the size of your shelf case .  
(Special-sized curtains are also available.)  
If a curtain is mounted in a wrong position, the energy saving effect may not be obtained.
